

To whom it may concern;

Since 2019, Prosser Memorial Health has used the SQA to automate semen analysis procedures. Our satisfaction with the analyzer as well as the quality of the customer service is without equal. The analyzer is easy to use, provides excellent results, and in two years of use it has never broken down.

Since its inception into our lab, our OB and family practice doctors started ordering routine analyses for their patients, and now with the growth of our medical community it sees more use than ever.

I give the SQA an unqualified recommendation for any facility seeking to automate any semen analysis procedure.
