

UNION HEALTH

To whom it may concern,

I am writing to highly recommend the SQA-Vision for semen analysis. Having used this system extensively in my laboratory, I can confidently say that it is a game-changer in the field of semen analysis.

Compared to the traditional manual method, the SQA-Vision is much quicker and less subjective. The automated system provides fast and reliable results with no downtime for several years of use. This is a major advantage, as it allows us to obtain results in a fraction of the time it would take using the manual method.

In addition, the SQA-Vision is not labor-intensive, meaning maintenance is simple and we can run patient samples with minimal staffing needs. The system also has standardized testing, which ensures consistency and accuracy of results. This is a key factor in providing high-quality care to our patients.

One of the most impressive aspects of SQA-Vision is the exceptional customer support. The company has been responsive to our needs and has provided excellent training and support throughout our use of the system. This has made it easy for us to integrate the SQA-Vision into our practice and obtain the best possible results for our patients.

In summary, I highly recommend the SQA-Vision for semen analysis. It is a reliable, efficient, and standardized system that has significantly improved our ability to provide quality care to our patients.

Sincerely,

Jason Jones,
Laboratory Manager
